

1.write a python program for perfect number [6---->1,2,3(factors of 6)--->1+2+3=6---->perfect number]

```
n=int(input("enter a nuber"))
sum=0

for i in range(1,n,1):
    if n%i==0:
        sum=sum+i
print(sum)
if sum==n:
    print(n," is a perfect sure nuber")
else:
    print(n,"not a perfect squre number")
```

```
enter a nuber6
6
6 is a perfect sure nuber
```

2.write a python program for spy number [123 ---->1+2+3=6 and 1*2*3=6 ---->become spy number]

```
num=int(input("enter a number"))
save=num
sum_num=0
pro_num=1

while num!=0:
    r=num%10
    sum_num=sum_num+r
    pro_num=pro_num*r
    num=num//10
if sum_num==pro_num:
    print(save,"is spy number")
else:
    print("not a spy nuber")
```

```
enter a number123
123 is spy number
```

3.write python program for buzz number [divisible by 7 or end with 7]

```
n=int(input("enter a number"))
last_number=n%10

if n%7==0 or last_number==7:
    print(n," is a buzz number")
else:
    print("is not a buzz nuber")
```

```
enter a number3457
3457 is a buzz number
```

4.write a python program for strong number [145--->1!+4!+5!---->145]

```
n=int(input("enter a number"))
sum=0
save=n

while n!=0:
    r=n%10
    fact=1
    for i in range(1,r+1,1):
        fact=fact*i
    sum=sum+fact
    n=n//10

if save==sum:
    print(save," is strong number")
else:
    print("not a string number")
```

```
enter a number145
145 is strong number
```
