

1.write a python program to print the first non repeated chracter in a string (eg : Nandeesh a -----> d)

```
str=input("enter a string ")
n=len(str)

for i in range(0,n-1+1,1):
    repeat=0
    for j in range(0,n-1+1,1):
        if i!=j and str[i]==str[j]:
            repeat=1
            break
    if repeat==0:
        print("first non-repeated character is",str[i])
        break
```

```
enter a string  nandeesh a
first non-repeated character is d
```

2.write a program to count the number os words in a string [eg "Python is interpreted langauge" -----> 4]

```
str="Python is interpreted langauge"
space=0

for i in str:
    if i==" ":
        space=space+1
words=space+1
print("total words in a string is",words)
```

```
total words in a string is 4
```

3.write a program to check the number is even or odd without using a mod operater

```
n=int(input("enter a nuber "))

if (n//2)*2==n:
    print(n,"is even number")
else:
    print(n,"is odd number")
```

```
enter a nuber  5
5 is odd number
```

4.write a python program to generate a random numbers from 1000 to 2000

```
import random
num=random.randint(1000,2000)
print(num)
```

```
1407
```

5.You have a list of numbers:

```
numbers = [3, 5, 7, 2, 8]
```

Question:

Find the maximum number in the list without using max().

Expected Output: 8

```
num=[3, 5, 18, 2, 8]
max_num=3

for i in num:
    if i>=max_num:
        max_num=i
print(max_num)
```

```
18
```

You have a dictionary of student marks:
marks = {"Alice": 85, "Bob": 58, "Charlie": 92, "David": 47}
Question:
Create a list of names of students who scored more than 60.

Expected Output:['Alice', 'Charlie']

```
marks = {"Alice": 85, "Bob": 58, "Charlie": 92, "David": 47}
lis=[]

for name,score in marks.items():
    if score>60:
        lis.append(name)
print(lis)
```

```
['Alice', 'Charlie']
```
